Why a Master's in Management?

The MBA is Not for Everyone

The MBA offers a broad view of business and is focused on integrating business functions. Many people prefer to pursue more specialized interests while gaining enough general business knowledge to tie their specialized interests to corporate goals and strategies.

Business and Technology Are Converging

There is increased demand for professionals and managers who understand business and technology, and the value of these "boundary spanners" is expected to increase.

It's Time

Our MSM program is designed to be practical, relevant, and convenient. It is a viable option for busy professionals and there is a link to our MBA for graduates who wish to continue their education.
